

# LEARNING IS

## Challenge Based Learning

AN ENGAGING  
MULTIDISCIPLINARY APPROACH  
THAT LEVERAGES TECHNOLOGY TO  
SOLVE REAL WORLD PROBLEMS  
—FROM YOUR CLASSROOM—

## WORKSHOP

Challenge Based Learning is for educators who want to engage in a multidisciplinary approach to teaching and learning that encourages students to leverage the technology they use daily to solve real-world problems through efforts in their homes, schools, and communities.

These workshops are designed to energise your teaching staff and inspire 21<sup>st</sup> century skill integration while addressing ACARA national cross-curriculum priorities and general capabilities.

## TWO DAY WORKSHOP

This hands-on workshop will explore the concepts and attributes of Challenge Based Learning and discuss the differences and similarities of related pedagogies.

Participants will have an opportunity to design an experience that challenges students to find an innovative solution to a contemporary problem and will learn how to use tools that enable students to create, collaborate, communicate, and publish their solutions and reflections.

This workshop is recommended for school communities familiar with the iOS foundations and who are driven to further transform the experience and environment of teaching and learning. The Foundations Series available in mid-January is encouraged for teachers keen to take this next step.
